

Postgres 13

<https://blog.mindmeldwithminesh.com/how-to-install-postgresql-13-on-ubuntu-20-04-18-04-93f550f78cce>

```
systemctl status postgresql.service
```

```
sudo systemctl enable postgresql
```

Follow the above guid from here if postgres 13 isnt getting installed with the given command in odoo doc. So postgresql 13 will be installed and during the odoo package installation postgresql will be upgraded to the latest version

Package installer:

https://www.odoo.com/documentation/18.0/administration/on_premise/packages.html

Python gets installed during the odoo package installation, but if somehow python is not installed then python should be installed manually

Python version > 3.10

Following installation guide for ubuntu
